

1. What we're building:

Name- Free Fire Flux Alliance (FFF)

Make a website where people will be able to post their video games on my website where people from anywhere can access it. It would be a way for people to popularize their games. People can also find games if they don't know where to go to download and they can also use categories to find games to play. They can also use our special in-built AI to find games of their liking or just for general usage.

- Figure out how to make a website public and understand how to make a website in general.
- Add cool design but not too full because people might not enjoy the fullness/colorfulness of design.
- Add categories
- Figure out a way to let people upload their games to your website.
- Maybe find a way to popularize your website, most likely social media. **Only do this if you have time, this is NOT a priority.**
- Easy user interaction
- Classic simple games
- Colorful poppy, nice aesthetic
- Include game cheat codes in description

2. Roles

The founder of Free Fire Arena (Krishav Soundarapandian) and the founder of Flux Nova are combining in order to make the website called Free Fire Flux Alliance.

Krishav and Mohit will both work on code and make constant improvement whilst expanding knowledge not only about code but also communication skills and brainstorming skills.

Overall, we will both work on the website regardless of specific jobs because we want each other to experience multiple aspects of making this website.
